Sprawozdanie PAMSI

Zadanie 2 – Tablica, stoper ,interfejs.

Polecenie: zmierzyć czas działania algorytmów powiększania tablic dynamicznych.

void tab_mng::enlarge_by1(int n_size){
 while(this->size<n size){</pre>

```
this->size++;
        int * tab = new int[this->size];
        for(int i=0; i<this->size; i++) {
         tab[i]=this->table[i];
        delete [] this->table;
        this->table = tab;
   Ilustracja 1: Algorytm powiększania tablicy o 1
void tab mng::enlarge byx2(int n size){
    int a=2;
    while(this->size<n_size){
        this->size=this->size*2;
        int * tab = new int[this->size];
        for(int i=0; i<=(this->size)/a; i++) {
        tab[i]=this->table[i];
       delete [] this->table;
       this->table = tab;
       a=a*2;
    if(n size<this->size){
    tab mng::reduce tab(n size);
Ilustracja 2: Algorytm powiększania rozmiaru tablicy x2
void tab mng::enlarge by power2(int n size){
    int b = this->size;
    int c = this->size;
    while(this->size<n size){
        this->size=this->size*this->size;
        b=this->size/c;
        int * tab = new int[this->size];
        for(int i=0; i<=(this->size)/b; i++){
        tab[i]=this->table[i];
       delete [] this->table;
       this->table=tab;
   if(n size<this->size){
   tab_mng::reduce_tab(n_size);
```
